TFT Display Module

Part Number E70RF-I-MW450-N

Overview:

- 7.0-inch TFT (98.70x160.80mm)
- 1200x1920 Pixels
- 4-Lane MIPI Interface
- Wide Temperature Range
- All Viewing Angles

- IPS, Transmissive
- No Touch Panel
- 450 NITS
- TFT IC: HX8279*2
- RoHS Compliant

Description

This is a color active matrix TFT (Thin Film Transistor) LCD (Liquid Crystal Display) that uses amorphous silicon TFT as a switching device. This model is composed of a transmissive type TFT-LCD Panel, driver circuit, back-light unit. The resolution of a 7.0" TFT-LCD contains 1200x1920 pixels, and can display up to 16.7M colors.

Features

Input Voltage: 3.3V

TFT Interface: 4-Lane MIPI

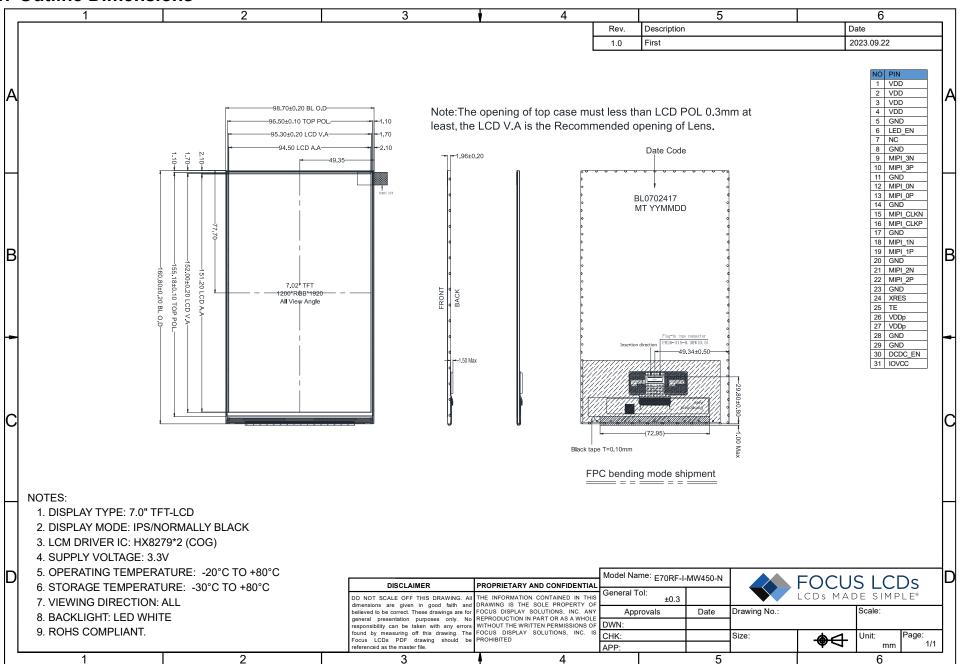

General Information Items	Specification Main Panel	Unit	Note
TFT Display Area (AA)	94.50(H) x 151.20(V) (7.0 inch)	mm	
Driver Element	TFT active matrix		
Display Colors	16.7M	colors	
Number of Pixels	1200(RGB)x1920	dots	
TFT Pixel Arrangement	RGB vertical stripe		
Pixel Pitch	0.07875 (H) x 0.07875 (V)	mm	
Viewing Angle	ALL	o'clock	
TFT Controller IC	HX8279*2		
Display Mode	Transmissive/Normally Black		
Operating Temperature	-20 to +80	°C	
Storage Temperature	-30 to +80	°C	

Mechanical Information

Item		Min.	Тур.	Max.	Unit	Note
	Horizontal (H)		98.70		mm	
Module Size	Vertical (V)		160.80		mm	
Depth (D)			1.96		mm	
Weight			69		g	Approximate

Viewing Angle	Vor	ΘТ		75	80			
	Ver.	ΘВ	ΘВ		80			
Option View Direction				ALL				(1)

Measuring Conditions:

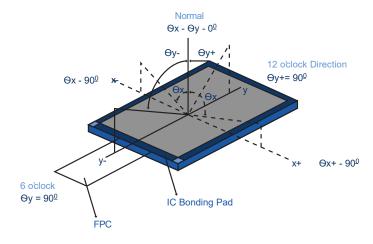

- 1. Dark Room
- 2. Ambient Temperature of 25±2°C
- 3. 15 Minute Warm up

Optical Specification Reference Notes:

(1) Definition of Viewing Angle:

The viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3,9 o'clock direction and the vertical or 6,12 o'clock direction with respect to the optical axis which is normal to the LCD surface.

(2) Definition of Contrast Ratio:

Measured at the center point of panel. The contrast ratio (Cr) measured on a module, is the ratio between the luminance (Lw) in a full white area (R=G=B=1) and the luminance (Ld) in a dark area (R=G=B=0).

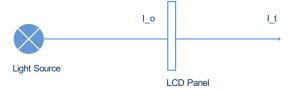

$$Cr = \frac{Lw}{Ld}$$

(3) Definition of Transmittance (T%):

The transmittance of the panel including the polarizers is measured with electrical driving. The equation for transmittance Tr is:

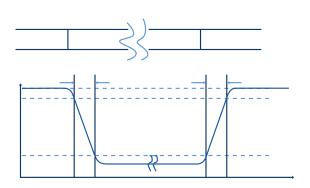

$$Tr = \frac{It}{lo} x 100\%$$

Io = the brightness of the light source.
It = the brightness after panel transmission

(4) Definition of Response Time (T_R, T_F):

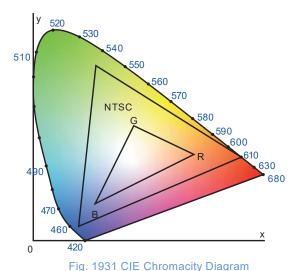

The rise time 'Tr' is defined as the time for luminance to change from 90% to 10% as a result of a change of the electrical condition. The fall time 'Tf' is defined as the time for luminance to change from 10% to 90% as a result of a change of the electrical condition.

(5) Definition of Color Gamut:

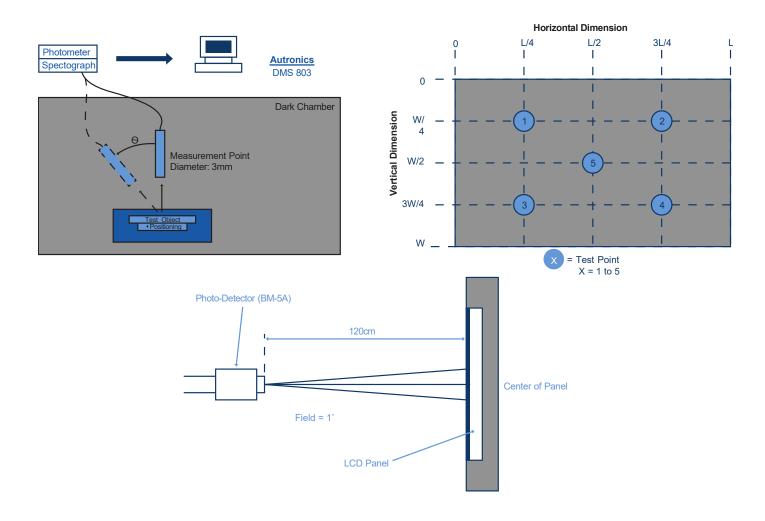

Measuring machine CFT-01. NTSC's Primaries: $R(x,y,Y),G(x,y,Y),\ B(x,y,Y).$ FPM520 of Westar Display Technologies, INC., which utilized SR-3 for Chromaticity and BM-5A for other optical characteristics. The color chromaticity shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.

Color Gamut: S = Area of RGB Triangle x 100% Area of NTSC Triangle

(6) Definition of Optical Measurement Setup:

The LCD module should be stabilized at a given temperature for 20 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting backlight for 20 minutes.

5. TFT Electrical Characteristics

5.1 Absolute Maximum rating (Ta=25°C, VSS=0V)

Characteristics	Symbol	Min	Max	Unit
Digital Supply Voltage	VDD	3.0	8.4	V
IC Supply Voltage	VDDp	3.0	4.8	V
Supply Voltage (Logic)	IOVCC	-0.3	2.1	V
Operating Temperature	ТОР	-20	+80	°C
Storage Temperature	TST	-30	+80	°C

NOTE: If the absolute maximum rating of the above parameters is exceeded, even momentarily, the quality of the product may be degraded. Absolute maximum ratings specify the values which the product may be physically damaged if exceeded. Be sure to use the product within the range of the absolute maximum ratings.

5.2 DC Electrical Characteristics

Characteristics	Symbol	Min	Тур.	Max	Unit	Note
Davier Oversky less 4 Vallage	VDDp	3.0	3.3	4.8	V	
Power Supply Input Voltage	IOVCC	1.7	1.8	2.0	V	
Normal Mode Current Consumption	IDD_3.3V		165	300	mA	
	IDD_1.8V	-	17	30	mA	
Level Input Voltage	VIH	0.8*IOVCC		IOVCC	V	
Level Input Voltage	VIL	GND		0.2*IOVCC	V	
Lovel Output Voltage	VOH	0.8*IOVCC		IOVCC	V	
Level Output Voltage	VOL	GND		0.2*IOVCC	V	
DCDC_EN logic high voltage	VOH	1.4			V	
	VOL			0.4	V	

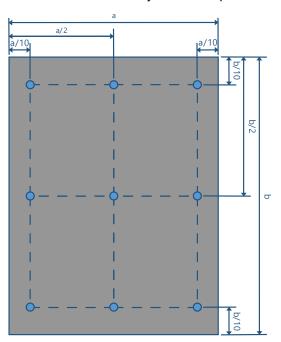

5.3 LED Backlight Characteristics

The backlight system is edge lighting type.

Item	Symbol	Min	Тур.	Max	Unit	Note
VLED Supply Voltage	VDD	4.5	5.0	7.5	V	
VLED Current consumption	IDD		250	500	mA	
LED_EN logic high voltage	VIH	1.4			V	
LED_EN logic low voltage	VIL			0.4	V	
PWM Control Frequency	Fdim	100		100K	Hz	

Note: Luminance Uniformity of these 9 points is defined as below:

6. TFT AC Characteristics

6.1 High Speed Data Transmission: Data-Clock Timing

For high speed data transmission data-clock timing diagrams and tables, see table and diagram on page 115 of the data sheet for controller IC HX8279. The data sheet can be found here:

https://focuslcds.com/wp-content/uploads/Drivers/HX8279-D DS v03.pdf

6.2 High Speed Data Transmission

For high speed data transmission diagrams and tables, see the first table and diagram page 113 of the data sheet for controller IC HX8279. The data sheet can be found here:

https://focuslcds.com/wp-content/uploads/Drivers/HX8279-D DS v03.pdf

6.3 Turnaround Procedure

For turnaround procedure diagrams and tables, see the second table and diagram page 113 of the datasheet for controller IC HX8279. The data sheet can be found here:

https://focuslcds.com/wp-content/uploads/Drivers/HX8279-D DS v03.pdf

6.4 Switching the Clock Lane Between Clock Transmission and Low-Power Mode

For switching the clock lane between clock transmission and low-power mode tables and diagrams, see page 113 of the data sheet for controller IC HX8279. The data sheet can be found here:

https://focuslcds.com/wp-content/uploads/Drivers/HX8279-D_DS_v03.pdf

6.5 Reset Timing Characteristics

For the reset timing characteristics table and diagram, see page 119 for the data sheet for controller IC HX8279. The data sheet can be found here:

https://focuslcds.com/wp-content/uploads/Drivers/HX8279-D DS v03.pdf

7. Quality Inspection Standards

For TFT quality inspection standards, please see the following link: https://focuslcds.com/lcd-resources/tft-quality-inspection-standards/

8. Cautions and Handling Precautions

8.1 Handling and Operating the Module

- 1. When the module is assembled, it should be attached to the system firmly. Do not warp or twist the module during assembly work.
- 2. Protect the module from physical shock or any force. In addition to damage, this may cause improper operation or damage to the module and back-light unit.
- 3. Note that polarizer is very fragile and could be easily damaged. Do not press or scratch the surface.
- 4. Do not allow drops of water or chemicals to remain on the display surface. If you have the droplets for a long time, staining and discoloration may occur.
- 5. If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- 6. The desirable cleaners are water, IPA (Isopropyl Alcohol) or Hexane. Do not use ketene type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- 7. If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, legs, or clothes, it must be washed away thoroughly with soap.
- 8. Protect the module from static; it may cause damage to the CMOS ICs.
- 9. Use fingerstalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- 10. Do not disassemble the module.
- 11. Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- 12. Pins of I/F connector shall not be touched directly with bare hands.
- 13. Do not connect, disconnect the module in the "Power ON" condition.
- 14. Power supply should always be turned on/off by the item Power On Sequence & Power Off Sequence.

8.2 Storage and Transportation

- 1. Do not leave the panel in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0 to 35 °C and relative humidity of less than 70%.
- 2. Do not store the TFT-LCD module in direct sunlight.
- 3. The module shall be stored in a dark place. When storing the modules for a long time, be sure to adopt effective measures for protecting the modules from strong ultraviolet radiation, sunlight, or fluorescent light.
- 4. It is recommended that the modules should be stored under a condition where no condensation is allowed. Formation of dewdrops may cause an abnormal operation or a failure of the module. In particular, the greatest possible care should be taken to prevent any module from being operated where condensation has occurred inside.
- 5. This panel has its circuitry FPC on the bottom side and should be handled carefully in order not to be stressed.
